Subject: RE: PCB quartly testing for Sky Valley Education Center

Ryan-

Please ship the samples to:

Gerald Dodo

Supervisory Chemist

DWCO

USEPA Region 10 Laboratory

7411 Beach Dr. East

Port Orchard, WA 98366

Devlin and I spoke on the phone this afternoon around 3pm.

Devlin stated:

- Sky Valley Education Center (SVEC) added a few additional locations to collect air samples- such as in the electrical rooms.
- SVEC did not plan to collect collocated samples in the electrical rooms for the EPA laboratory to analyze.
- SVEC school did not plan to send any trip blanks to the EPA laboratory for analysis.
- SVEC is unable to obtain any additional PUF cartridges prior to the sampling event on Monday.

Devlin suggested that he could supply trip blanks to the EPA laboratory instead of collecting samples in the electrical room. I checked with our laboratory and they did not recommend this course of action.

EPA has not had opportunity to fully evaluate the sampling plan.

I will be at SVEC at 6am on Monday morning to observed the sample collection.

I can be reached by cell phone at Ex. 6 Personal Privacy (PP)

Sincerely,

Michelle Mullin | PCB Coordinator

Michelle,

Our intent is to be at the Devlin's office at 6:00 am on Monday. Sampling will commence thereafter and continue until complete (about 2 pm). The intent is that all samples will be shipped Monday afternoon for receipt by ALS Global on Tuesday.

I've attached a copy of the QAPP and a copy of ALS Global's SOP for the TO-10a methodology.

Thank you,

Ryan

I think this is missing the attachment.

What time will the sample devices be set up? I would like to observe this.

I am still getting the shipping info together.

Thanks,

Kendall and Michelle,

Here is the QA plan you requested. I have a section for Michelle to review and sign as well as myself. I also have that answer to the question you had about the filters:

They use SKC PUFs CAT No. 226-92 and Replacement PUFs P22692. The media used is SKC 75mm replacement PUF , ISO 9001 certified, catalog # P226131.

Where would you like the EPA media to be delivered too?

Devlin

Kendall,

Here is the RFP for the work to be completed. The will be performing split sampling with two pumps in each of the seven locations.

I have forwarded your request to Fulcrum. I have also Fulcum to provide a QA plan for the work to be completed on Monday. I will make sure that this information is provided to you.

Devlin

Devlin, please send us a copy of Fulcrum Environmental's QA plan for this project. At a minimum we strongly recommend that the following elements be included:

to comply with TO-10a they should include:

- 1 field blank per 20 samples – PUF cartridge shipped to the field and shipped back to the lab.
- 1 field spike per 20 samples – PUF cartridge spiked at the lab with a known concentration of PCB and then shipped to the field in a sealed container.
- 1 duplicate per 10 samples – should ideally be collected near the same point, at the same time – they obviously would need to use 2 pumps for that.

For the wipe samples the standard QC samples (field blank per shipment, 1 duplicate per 10, 1 MS/MSD pair per 20, collected on adjacent squares of the surface).

In terms of preventing the cross-contamination issue, if they use more than 1 pump they can bring down the likelihood of contamination spreading to so many samples from the pump. We'd need some more info on what sort of pump they're using before recommending any kind of equipment blanks (their QAPP that should have the info).

The inlets of the pump sampling apparatus should be 1-2 m above the ground, as specific in TO-10A. The purpose of that is to prevent dust from the floor from being carried into the pump (possibly what caused the contamination the first time).

Subject: Re: PCB quartly testing for Sky Valley Education Center

Good Morning,

I just wanted to followup our meeting on Monday as well as tough base on the plan for additional testing as previously discussed. I have contacted Fulcrum Environmental Consulting. The will be onsite Monday, March 6th to conduct air and wipe sample testing for a several locations. We would have like to have them out sooner, but the lab has to build the media filters for the testing. We will either get them Friday Afternoon or Monday morning. The testing will include split air samples (7) of the prior locations that were identified as cross contamination, it will also include single air samples of the electrical rooms that had a transformer in the space, we will also include two wipe samples in the spaces with a transformer (one wipe sample will be taken in the space and the other will be taken on the transformer itself). I have included a map outlining the testing locations, types of testing, and number of tests taking place. I have also included pictures of the electrical rooms that had transformers as well as other electrical rooms in those areas.

I will need to know what the EPA would like to do with the 7 air samples for there review. Can the EPA clarify they would like to get those samples for testing?

Please let me know if you have any questions regarding the testing for next Monday.

Hi All-

The Region 10 lab can handle the split sample analysis.

John- do you have a QAPP for your air sample collection that you can get from PBS?

Devlin and John, after the meeting today we discussed the cross-contamination explanation. If PBS can provide sample data from the site sampled prior to SVEC, and those results show high levels of PCBs, we feel that would offer additional validation of that explanation.
